

# CONCAWE & EGTEI

## Past

- CONCAWE on behalf of the European oil industry has provided EGTEI with cost data covering the refinery sector
- EGTEI goal to improve RAINS quality is supported
- CONCAWE satisfied with final outcome

## Present

- CONCAWE recognises that database is weak on sub-sector activity level (energy used), not on costs
- Activity information would help in prioritising sectors in terms of importance

## Future

- EGTEI should develop common approach to get activity data
- What demands on RAINS are expected and what does this mean for data required from EGTEI? Align EGTEI with use of RAINS for policy development
- Role of member states
