

CITEPA is the French National Emission Inventory Agency. More broadly, we are experts in air pollutant and greenhouse gas (GHG) emission inventories, projections, helping decision-making as well as in assessing the cost-efficiency of policies and measures.

Technical assistance

CITEPA's capacity building, assistance and expertise may cover the following actions:

- **To develop** national or regional air pollutant and GHG emission inventories which may include geographical information,
- **To implement Monitoring Reporting Verification (MRV) procedures** of inventories, NDCs, NAMAs, National Communications, BURs, air emission reduction plans...),
- **To review** information systems, governance, transparency framework as well as integrated air-climate-energy policies,
- **To project** the impacts of mitigation policies and measures in a time horizon of a few years, 10 years, 20 years or more, in geographical zones that may cover a city, a region or a whole nation...

We also provide:

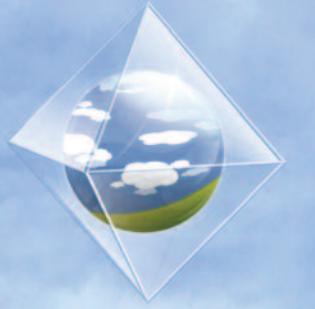

- **Decision-making tools** on the impacts of mobility on emissions (pollutants and GHGs); LULUCF modelling; register of reported emissions by industrial plants,
- **Techno-economical assessments** of mitigation measures and scenarios relating to air pollutants and GHG emissions,
- **Third expertise** of **carbon footprints** and optimization of **mitigation plans**,
- **Monitoring plans**: CITEPA can help any facility subject to reporting requirements, under the EU GHG Emissions Trading Scheme (ETS), to develop their monitoring plans for the 3rd trading period,
- **Support of domestic GHG emission reduction projects** (MDD and MDP, REDD+): MRV, technical expertise...

Information and knowledge

- CITEPA **publishes** expert documents on emitting sectors as well as on GHG and air pollutant emission inventories; a monthly review of the latest legislative, regulatory, scientific, technological and economic developments regarding air pollution and climate change,
- CITEPA organizes **webinars and seminars**, as well as **training sessions** on different topics in Paris or in within the country on request.

Network and collaboration

- CITEPA is the scientific secretary of several international networks of experts such as the **French Cluster** (part of the Partnership on Transparency under the Paris Agreement), the **Cluster MED Climate Transparency Initiative** (implementing the Paris Agreement in emerging countries) as well as the **Task Force on Techno-economic issues** (CLRTAP).

Capacity building

Created in 1961, the International Expert Centre on Air Pollution and Climate Change (CITEPA) is a **not-for-profit** association. CITEPA identifies, analyses and disseminates data and methods on **air pollution and climate change** in particular emissions of air pollutants and greenhouse gases (GHGs).

CITEPA has been entrusted by the French Environment Ministry with the task of developing the **national inventories** of air pollutant and greenhouse gas emissions, under the commitments of France, in the framework of the European Union (EU) and the United Nations (UNFCCC and LRTAP Conventions).

CITEPA is a well established **pool of international experts** collaborating with the European Union, the United Nations, the World Bank and other international bodies.

We conduct **techno-economic** and forward studies in the areas of energy, industry, transport, waste, fluorinated gases, agriculture, land use and forestry (LULUCF).

Our team also provides training and technical support to businesses and administrations (technical expertise, GHG balances, audits...).

Our experts also **build the capacity** of foreign administrations in the field of inventories of air pollutant and greenhouse gas emissions (MRV of emission inventories and further work on transparency).

Mexico
2013-2016
Development of a single platform (web application) to report air pollutants and GHG emission inventories

Colombia
2017-2021
Memorandum of Understanding between National University of Colombia (UNAL) and CITEPA

Cali, Medellin and other cities in emerging countries in South America, Asia & Africa
2017-2021
"Green City Big Data" tool

France, Croatia, Tunisia, Morocco
2018-2020
Cluster MED Climate Transparency Initiative CMCTI

Croatia
2016-2017
Improvement of Croatian Environment Pollutant Register and its Integration into Croatian Environmental Information System

Russia
From 2017
CIS Center
Cost of BAT implementation in Russian industry

Kazakhstan
2016-2018
Support to the development of CO₂ e-reporting in Kazakhstan by the industry in the framework of the PMR

Serbia
2015-2017
Establishment of a mechanism for implementation of the MMR

France, New Caledonia
2013-2017
Spatialised regional inventory of air pollutant and GES emissions

China
2016-2017
Integration of air pollution and climate issues in France and China: MoU with CRAES in Beijing

China
2015-2017
Academic and expertise cooperation between the Beijing Environmental Protection Bureau and CITEPA on air pollution

French speaking countries
From 2014
Cluster francophone (Part of the Partnership on Transparency)

France
1961-2017
Producing the French national emission inventories on air pollutants and greenhouse gases

2015-2016
CO₂ and pollutant charter in the transport sector

2015-2016
PREPA. National Plan for Reducing Air Pollutant Emissions

2016-2017
Paris Region Air Protection Plan (PPA)

From 2017
Local Climate-Air-Energy Plans (PCAET)

From 2017
Benchmarks, carbon footprints, solvent emission reduction plans, training sessions
